CONCLUSION

Integrated digital marketing ecosystem and final project summary

WHAT IS E-COMMERCE?

Academic foundation for the Gul Bakery storefront

Definition

E-commerce is the buying and selling of products or services through electronic networks, especially the internet.

A typical e-commerce journey moves from product discovery to product information, cart and checkout.

Gul Bakery Application

Shopify provides the digital storefront.

Collections organize products for discovery.

Product pages present product information.

Cart and checkout support the purchase journey.

WHAT IS DIGITAL MARKETING?

The communication and acquisition layer around e-commerce

Definition

Digital marketing uses digital channels and technologies to communicate with audiences and support business objectives.

It includes organic social media, paid advertising, email, content and digital analytics.

Gul Bakery Application

Facebook and Instagram support awareness and engagement.

Meta Ads support paid promotion.

Brevo supports email marketing.

WhatsApp supports direct customer communication.

WHAT IS SHOPIFY?

The e-commerce platform used for Gul Bakery

Core Functions

- Online storefront and theme management
- Product and collection management
- Navigation and content pages
- Cart and checkout
- Store customization

Why It Matters Here

- Acts as the central e-commerce touchpoint.
- Connects product discovery with purchasing.
- Supports branded visual presentation.
- Provides a platform for Custom Liquid/theme customization.

DIGITAL PLATFORM OVERVIEW

What each platform contributes to the project

Core Platforms

Shopify — e-commerce storefront
Canva — logo and graphic design
Facebook + Instagram — social presence
WhatsApp — direct communication
Brevo — email marketing

Business & Professional Tools

Meta Business Suite — social management
Meta Business Portfolio / Dataset / Pixel / Events — business & tracking ecosystem
Meta Ads Manager — paid campaigns
LinkedIn — professional presence
AI tools — assistance where evidenced in the supplied material

PROJECT INTRODUCTION

Gul Bakery as an integrated digital business project

- GulBakes is a bakery-focused e-commerce project.
- The project combines **bakery products, digital marketing, social media, and online selling**.
- Shopify is used as the main e-commerce platform.
- Facebook and Instagram are used for brand awareness and customer engagement.
- WhatsApp Business is used for direct customer communication.
- Brevo is used for email marketing and customer retention.
- Canva is used for branding and creative content.

PROJECT BACKGROUND

Why a bakery project benefits from an integrated digital ecosystem

Background

Modern bakery customers can discover products through visual and social channels.

A digital storefront can organize products, collections and purchasing steps.

Direct messaging and email can support customer communication and retention.

Gul Bakery Focus

Blush-pink bakery identity

Visual product presentation

Online product discovery

Digital customer touchpoints

Practical application of marketing frameworks

PROJECT INTRODUCTION

Gul Bakery as an integrated digital business project

Objective

Build a complete digital presence for the Gul Bakery project.

Connect branding, social media, e-commerce, customer communication and marketing tools.

Document practical implementation through supplied screenshots.

The project combines **bakery products, digital marketing, social media, and online selling**

Shopify is used as the main e-commerce platform.

Facebook and Instagram are used for brand awareness and customer engagement.

WhatsApp Business is used for direct customer communication.

Brevo is used for email marketing and customer retention.

Project Scope

Brand identity and visual design.

Social media setup.

Shopify store development.

Product catalog and product management.

Website navigation and pages.

Shopify customization.

WhatsApp Business setup.

Meta Business tools.

AI-assisted content and workflow.

USE OF AI TOOLS

AI-assisted workflow within the Gul Bakery project

AI Role

AI can assist with ideation, writing, research, planning, analysis and technical problem-solving.

In digital marketing, AI can support content concepts, campaign ideas and e-commerce implementation.

AI was used to support different stages of the project.

AI helped structure product information.

AI was used as an assistance tool rather than replacing human decision-making.

Final content and implementation were reviewed and adjusted by the human user.

Evidence & Disclosure

Document only AI tools actually visible or explicitly evidenced.

Separate AI assistance from human review, editing and implementation.

Do not claim AI use for activities without evidence.

AI + HUMAN WORKFLOW

A transparent way to document AI assistance

CANVA — LOGO CREATION

Brand identity development

PRACTICAL EVIDENCE

Canva editor showing the GulBakes logo design workspace.

Result: A branded logo asset is visibly being developed.

EXPLANATION

Canva was used for GulBakes visual branding. Brand colors were selected to maintain consistency. Consistent colors help customers recognize the brand..

Figure 1 — Canva editor showing the GulBakes logo design workspace.

PRACTICAL EVIDENCE

Screenshot: Instagram profile showing Gul Bakery branding, profile image and visible content grid.

Result: The Instagram presence is established.

EXPLANATION

The screenshot visibly shows the Instagram profile and branded posts.

Figure 2 — Instagram profile showing Gul Bakery branding, profile image and visible content grid.

12 Email Account

Gul Bakery social presence

PRACTICAL EVIDENCE

Screenshot: Account personal-information screen showing profile and contact fields.

Result: Account configuration evidence is documented without repeating sensitive values

EXPLANATION

The screenshot visibly shows the Email profile

Figure 3 — Instagram profile showing Gul Bakery branding, profile image and visible content grid.

INSTAGRAM PROFILE

Gul Bakery social presence

Figure 4 — Instagram profile showing Gul Bakery branding, profile image and visible content grid.

PRACTICAL EVIDENCE

Screenshot: Instagram profile showing Gul Bakery branding, profile image and visible content grid.

Result: The Instagram presence is established.

EXPLANATION

Instagram is used as a visual marketing platform for GulBakes. It can showcase cakes, bakery products, and promotional content. Instagram helps build brand awareness. It provides a way to engage with potential customers. The profile contributes to the overall digital presence of GulBakes.

FACEBOOK BUSINESS PAGE

Brand page presence

Figure 5 — Facebook page view for GulBakes showing the bakery cover/logo and business information.

PRACTICAL EVIDENCE

Screenshot: Facebook page view for GulBakes showing the bakery cover/logo and business information.

Result: The business page is visibly established.

EXPLANATION

A Facebook Business Page represents the business on Facebook.

It provides an official online presence for GulBakes. It can be used to publish posts and promotional content. Customers can interact with the business through the page.

It can also connect with Meta's business tools

META BUSINESS SUITE

Connected business management

Figure 6 — Meta Business Suite showing GulBakes business assets and management navigation.

PRACTICAL EVIDENCE: Meta Business Suite showing the Guls Bake business portfolio and a connected Facebook/Instagram asset.
Result: The Meta Business Suite business-management layer is evidenced.

Screenshot: Meta Business Suite showing GulBakes business assets and management navigation.

Result: Meta Business Suite is used as a central management layer.

EXPLANATION

Meta Business Suite helps manage Facebook and Instagram activities. It provides a centralized environment for social media management. Businesses can manage content and interactions. It supports organized management of social media assets.

It is part of GulBakes overall Meta ecosystem.

META BUSINESS PORTFOLIO

Business account overview

PRACTICAL EVIDENCE

Screenshot: Meta account overview showing business portfolio and asset selection.

Result: The Meta business structure is documented.

EXPLANATION

Meta Business Portfolio organizes business assets. It can contain Facebook Pages, Instagram accounts, and other Meta assets. It helps manage access and permissions. It provides a centralized structure for business resources.

Figure 7 — Meta account overview showing business portfolio and asset selection.

Figure 8 — Meta Commerce Manager showing GulBakes catalog and product status.

PRACTICAL EVIDENCE

Screenshot: Meta Commerce Manager showing GulBakes catalog and product status.

Result: Commerce catalog management is configured.

EXPLANATION

Meta Commerce Manager is used for managing commerce-related activities on Meta. It supports product and shopping-related organization. It connects the commerce side of the business with Meta platforms. It contributes to the overall digital selling ecosystem.

PRACTICAL EVIDENCE

Screenshot: Meta Events Manager showing event activity and event metrics.

Result: Meta event tracking is evidenced without adding unsupported performance claims.

EXPLANATION

A dataset represents a collection of business data used for measurement.

Events represent actions or signals recorded from digital interactions.

Events can help understand customer activity.

Meta's technical ecosystem connects datasets, tracking, measurement, and advertising.

These tools support future performance measurement and optimization.

Figure 9— Meta Events Manager showing event activity and event metrics.

PRACTICAL EVIDENCE

Screenshot: Meta content dashboard showing published posts and reels.

Result: Content is managed through the Meta environment.

EXPLANATION

Meta content includes content published across Facebook and Instagram. Content can include images, promotional posts, and business updates. Content helps generate awareness and engagement. Canva can be used to create the visual assets. Meta platforms distribute the content to potential customers.

Figure 10 — Meta content dashboard showing published posts and reels.

SHOPIFY CONVERSION OPTIMIZATION AUDIT

Store review and optimization workflow

Figure 11 — Shopify interface showing a GulBakes conversion optimization audit.

PRACTICAL EVIDENCE

Screenshot: Shopify interface showing a GulBakes conversion optimization audit.

Result: The store has been reviewed through a conversion-oriented audit.

SCREENSHOT EXPLANATION

A conversion optimization audit reviews the customer experience of an online store.

It focuses on identifying areas that may affect customer actions.

Important areas include homepage presentation.

Product information should be clear.

Collections should be easy to navigate.

Product pages should provide useful information.

Cart and checkout should provide a clear purchasing path.

SHOPIFY APPS

Installed app ecosystem

PRACTICAL EVIDENCE

Screenshot: Shopify Apps page listing installed apps including Judge.me Reviews and other integrations.

Result: The store uses an app-based extension ecosystem.

EXPLANATION

The Shopify Apps extend the functionality of a Shopify store.
Apps can support marketing, sales, communication, analytics, or store management.
They can add features that are not available in the basic store setup.
Apps should be selected according to the store's actual requirements

Figure 12 — Shopify Apps page listing installed apps including Judge.me Reviews and other integrations.

PRACTICAL EVIDENCE

Screenshot: Shopify Messaging dashboard with visible message and campaign areas.

Result: Customer messaging functionality is configured in Shopify.

EXPLANATION

Shopify messaging supports communication related to the online store. It can help businesses communicate with customers. Messaging can support customer questions and engagement. It complements other communication channels such as WhatsApp and email.

Figure 13 — Shopify Messaging dashboard with visible message and campaign areas.

PRACTICAL EVIDENCE

Screenshot: Shopify Domains page showing connected domains including gulbakes.store.

Result: The storefront domain configuration is documented.

SCREENSHOT EXPLANATION

A domain is the web address customers use to access the online store. It represents the store's customer-facing web identity. A professional domain can strengthen brand recognition. Shopify allows a store to connect and manage its domain.

Figure 14 — Shopify Domains page showing connected domains including gulbakes.store.

SHOPIFY METAFIELD DEFINITION

Structured product information

Figure 15— Shopify settings showing a Variant Details metafield definition.

PRACTICAL EVIDENCE

Screenshot: Shopify settings showing a Variant Details metafield definition.

Result: Structured product data is configured through Shopify metafields.

EXPLANATION

Metafields allow additional information to be stored for Shopify resources. They can add custom information beyond Shopify's standard fields. They can be used for products, collections, and other resources. Metafield definitions specify what type of custom information is stored

SHOPIFY SHIPPING & DELIVERY

Shipping configuration

Figure 16— Shopify Shipping and delivery settings showing shipping profiles and delivery options.

PRACTICAL EVIDENCE

Screenshot: Shopify Shipping and delivery settings showing shipping profiles and delivery options.

Result: Shipping settings are configured within the Shopify admin.

EXPLANATION

Shipping and delivery determine how customers receive their orders. Shopify provides settings for managing delivery-related information. Shipping options can be configured according to the business requirements. Clear delivery information helps customers understand the ordering process

SHOPIFY ANALYTICS OVERVIEW

Store performance interface

Figure 17— Shopify analytics overview showing store metrics and the first-sale message.

PRACTICAL EVIDENCE

Screenshot: Shopify analytics overview showing store metrics and the first-sale message.

Result: The report documents the available analytics interface without inventing performance claims.

EXPLANATION

Shopify Analytics provides information about store activity.

It helps monitor important store metrics.

Analytics can support decision-making.

Businesses can use performance information to identify areas for improvement.

The project treats analytics as something to monitor rather than claiming unsupported results.

SHOPIFY SALES CHANNELS

Channel configuration

PRACTICAL EVIDENCE

Screenshot: Shopify Sales channels page showing Online Store, Facebook & Instagram and Point of Sale.

Result: Multiple commerce channels are configured.

EXPLANATION

Sales channels are places where customers can discover or purchase products.

Shopify can connect products with different selling channels.

Social media can support product discovery.

The Shopify online store acts as the main e-commerce channel.

Connected channels create a broader digital selling ecosystem.

Figure 18— Shopify Sales channels page showing Online Store, Facebook & Instagram and Point of Sale.

SHOPIFY ORDER DETAIL

Order workflow evidence

PRACTICAL EVIDENCE

Screenshot: Shopify order detail screen showing a customer order and product information.

Result: An order record is visibly present in the Shopify admin.

EXPLANATION

The screenshot visibly presents an order record with customer, product and order details.

Figure 19— Shopify order detail screen showing a customer order and product information.

SHOPIFY PRODUCT CATALOG

Product management

Figure 20— Shopify Products page showing the GulBakes product catalog.

PRACTICAL EVIDENCE

Screenshot: Shopify Products page showing the GulBakes product catalog.

Result: The product catalog is organized in Shopify.

EXPLANATION

Open the Shopify Admin. Go to **Products**.

Go to **Products**. Select **Add product**.

Select **Add product**.

Enter the product title and detailed product description.

Upload product images. Add the product price.

Configure inventory information.

Add product category or type.

Add relevant tags.

Assign the product to appropriate collections.

Configure variants if required.

Review the product's search-engine listing.

Save or publish the product.

After multiple products are created, the Products section functions as the store's

SHOPIFY PRODUCT EDITOR

Product configuration

Figure 21— Shopify product editor showing product content and configuration fields.

PRACTICAL EVIDENCE

Screenshot: Shopify product editor showing product content and configuration fields.

Result: Product information is managed through Shopify.

EXPLANATION

The Shopify Product Editor is the interface used to create and manage individual products.

A merchant can use the editor to add:

- Product title
- Description
- Product images
- Price
- Inventory
- Product organization
- Product status
- Product category
- Tags
- Variants
- Search-engine information

PRACTICAL EVIDENCE

Screenshot: Shopify Collections page showing multiple bakery collections.

Result: Products are organized into customer-facing collections.

SCREENSHOT EXPLANATION

Shopify Collections are groups of products organized according to a particular category, theme, purpose, or customer need.

For GulBakes, collections can be used for categories such as:

- Birthday Cakes
- Best Sellers
- Cakes
- Custom Cakes
- Other bakery product groups

Figure 24.1 — Shopify Collections page showing multiple bakery collections.

PRACTICAL EVIDENCE

Screenshot: Shopify collection editor showing Birthday Cakes and collection settings.

Result: A dedicated collection is configured.

SCREENSHOT EXPLANATION

A collection detail page is used to configure an individual collection. It can include the collection title, description, image, conditions or product assignment, and other settings.

The GulBakes screenshot shows the Birthday Cakes collection and its configuration settings. It provides evidence that a dedicated collection has been created and that products can be assigned to it.

Figure 22— Shopify collection editor showing Birthday Cakes and collection settings.

SHOPIFY DISCOUNT

Promotion configuration

Figure 23— Shopify discount settings showing a free-shipping discount code and eligibility rules.

PRACTICAL EVIDENCE

Screenshot: Shopify discount settings showing a free-shipping discount code and eligibility rules.

Result: A promotional discount is configured in the store.

SCREENSHOT EXPLANATION

A Shopify discount is a promotional mechanism used to provide customers with a specific offer or incentive.

Discounts can be based on different rules, such as:

Discount codes

Percentage discounts

Fixed-amount discounts

Free shipping

Customer eligibility

Minimum purchase requirements

Specific products or collections

SHOPIFY PAGES

Store content management

PRACTICAL EVIDENCE

Screenshot: Shopify Pages list showing multiple bakery content pages.

Result: Store content pages are managed in Shopify.

SCREENSHOT EXPLANATION

Shopify Pages are used to create informational and content-based pages within an online store.

Examples may include:

- About Us
- Contact
- Shipping Information
- Return Policy
- Custom Cakes
- Other informational pages

Figure 24— Shopify Pages list showing multiple bakery content pages.

SHOPIFY METAFIELDS & DEFINITIONS

Structured content configuration

Figure 25— Shopify metaobject/metafield definitions interface.

PRACTICAL EVIDENCE

Screenshot: Shopify metaobject/metafield definitions interface.

Result: Structured custom data fields are part of the store configuration.

SCREENSHOT EXPLANATION

Shopify Metafield Definitions provide a structured way to define custom data fields for the store.

They allow a merchant to specify what kind of additional information should be stored and how that information should be structured.

For GulBakes, metafield definitions can support customized product or content information beyond Shopify's standard fields.

Figure 26— Shopify Menus page showing main menu and footer menu items.

PRACTICAL EVIDENCE

Screenshot: Shopify Menus page showing main menu and footer menu items.

Result: Navigation is configured to support storefront discovery.

EXPLANATION

Shopify Navigation controls how customers move through the online store. Menus can contain links to products, collections, pages, blogs, and other storefront destinations.

Good navigation helps customers find important information quickly and creates a logical customer journey.

For GulBakes, the navigation structure connects the main storefront sections, collections, pages, and other customer-facing content

FACEBOOK & INSTAGRAM SALES CHANNEL

Commerce channel connection

Figure 27 — Shopify Facebook & Instagram sales channel overview with product status.

PRACTICAL EVIDENCE

Screenshot: Shopify Facebook & Instagram sales channel overview with product status.

Result: Facebook and Instagram commerce capabilities are configured.

EXPLANATION

Shopify can connect with Facebook and Instagram through sales-channel functionality.

This helps connect the online store with social platforms.

Social media can be used for product discovery. It creates a connection between social marketing and e-commerce.

PRACTICAL EVIDENCE

Screenshot: Shopify Blog posts page showing published bakery-related articles.

Result: Blog content is part of the store's content layer.

EXPLANATION

Shopify Blog Posts allow a store to publish written content directly within the online storefront. Blog content can be used for:

- Bakery information
- Product-related content
- Customer education
- Seasonal content
- Marketing communication
- Search-engine visibility

Figure 28— Shopify Blog posts page showing published bakery-related articles.

SHOPIFY BLOG EDITOR

Content creation workflow

Figure 29 — Shopify blog editor showing an article draft and content fields.

PRACTICAL EVIDENCE

Screenshot: Shopify blog editor showing an article draft and content fields.

Result: A structured content workflow is available for the store.

EXPLANATION

The Shopify Blog Editor is the workspace used to create and edit blog articles.

It allows content creators to prepare article text, add images, organize content, and manage publishing information.

The GulBakes project includes a practical Shopify blog editor screenshot showing the creation/editing environment for bakery content.

The blog editor is therefore an important part of the store because it allows GulBakes to combine e-commerce with content marketing.

SHOPIFY ONLINE STORE PREFERENCES

Store preferences

Figure 30— Shopify Online Store preferences page with visible store/search settings.

PRACTICAL EVIDENCE

Screenshot: Shopify Online Store preferences page with visible store/search settings.

Result: Store-level preferences are configured.

EXPLANATION

Shopify Online Store Preferences contain settings related to the online storefront and search-related configuration.

These settings help control aspects of how the store is represented and discovered online.

For GulBakes, the Online Store Preferences area forms part of the technical configuration of the website and supports the overall storefront setup.

SHOPIFY ONLINE STORE OVERVIEW

Storefront management

PRACTICAL EVIDENCE

Screenshot: Shopify Online Store overview showing the active Dawn theme and storefront preview.

Result: The storefront is managed through Shopify Online Store.

EXPLANATION

The Shopify Online Store overview provides access to the active storefront and its theme-management environment.

For GulBakes, the store overview provides a central place from which the storefront appearance and theme can be managed.

It connects the technical Shopify administration environment with the customer-facing website.

Figure 31— Shopify Online Store overview showing the active Dawn theme and storefront preview.

SHOPIFY THEME EDITOR

Homepage customization

Figure 32— Shopify Theme Editor showing the Gul Bakery homepage and theme sections.

PRACTICAL EVIDENCE

Screenshot: Shopify Theme Editor showing the Gul Bakery homepage and theme sections.

Result: The bakery storefront presentation is customized.

EXPLANATION

The Shopify Theme Editor is used to customize the visual structure and content of the storefront without necessarily modifying the entire theme codebase.

For GulBakes, the theme editor is used to organize the storefront from the **header through the footer**.

The major customer-facing sections include:

Header → Collections/Navigation → Homepage Content → Product Sections → All Cakes → Custom Cakes → About Page → Search → Footer

The theme editor allows these sections to be arranged and customized according to the bakery's visual identity and customer journey.

The project documentation identifies Shopify theme management as a core part of the e-commerce setup and describes the storefront as the branded customer experience.

SHOPIFY COLLECTIONS — STOREFRONT

Customer-facing collection page

Figure 33 — Gul Bakery storefront collection page with bakery categories and product cards.

PRACTICAL EVIDENCE

Screenshot: Gul Bakery storefront collection page with bakery categories and product cards.

Result: The collection experience is visibly branded.

EXPLANATION

The Collection Storefront is the customer-facing page where products belonging to a particular collection are displayed.

For GulBakes, collection pages help customers browse bakery products according to categories instead of searching through the entire product catalog.

Figure 34 — Gul Bakery All Cakes page displaying a grid of cake products.

PRACTICAL EVIDENCE

Screenshot: Gul Bakery All Cakes page displaying a grid of cake products.

Result: Customers can browse products through the storefront.

EXPLANATION

The All Cakes page provides customers with a centralized view of the cake products available in the GulBakes store.

It acts as a product-discovery page and allows customers to browse multiple cake products from one location.

This page contributes to the consideration stage of the customer journey because customers can compare available products before opening individual product pages.

Figure 35— Gul Bakery Custom Cakes page with service information and contact form.

PRACTICAL EVIDENCE

Screenshot: Gul Bakery Custom Cakes page with service information and contact form.

Result: Custom cake inquiries are supported by the storefront.

EXPLANATION

The Custom Cakes page is designed for customers who require a personalized or customized cake.

Instead of limiting the customer to predefined products, the page can provide information about custom cake services and a way to communicate an inquiry.

This creates an additional customer journey for customers whose requirements cannot be completely represented through standard product listings.

Figure 36 — Gul Bakery About page with brand copy and service information.

PRACTICAL EVIDENCE

Screenshot: Gul Bakery About page with brand copy and service information.

Result: Brand information is presented on the storefront.

EXPLANATION

The About page communicates information about GulBakes as a bakery brand. It can be used to explain the bakery's identity, story, values, or customer-focused approach.

The About page supports trust because customers can learn more about the business rather than seeing only products and prices.

PRACTICAL EVIDENCE

Screenshot: Gul Bakery storefront search page.

Result: Search supports product/content discovery.

EXPLANATION

The Shopify Search feature allows customers to find products or content by entering a search term.

Search is particularly useful when a store contains multiple products and collections. It provides another route for customers to move from an information need directly toward relevant products.

Figure 37— Gul Bakery storefront search page.

SHOPIFY PRODUCT PAGE — DESKTOP

Product detail experience

Figure 38— Gul Bakery product page showing product image, details and purchase controls.

PRACTICAL EVIDENCE

Screenshot: Gul Bakery product page showing product image, details and purchase controls.

Result: A customer-facing product page is available.

EXPLANATION

The screenshot visibly shows a detailed product presentation and purchasing interface.

Figure 39— Gul Bakery cart view showing cart state and storefront content.

PRACTICAL EVIDENCE

Screenshot: Gul Bakery cart view showing cart state and storefront content.

Result: The cart stage of the customer journey is documented.

EXPLANATION

The Shopify Cart is the stage where selected products are collected before the customer continues toward checkout.

The cart allows customers to review their selected items and proceed with the purchasing process.

In GulBakes, the cart represents an important stage in the customer journey because it connects product discovery with purchase.

The screenshot provides practical evidence of the GulBakes cart interface and customer navigation options.

Figure 40— Gul Bakery article page featuring bakery content and imagery.

PRACTICAL EVIDENCE

Screenshot: Gul Bakery article page featuring bakery content and imagery.

Result: Content marketing is integrated into the storefront.

EXPLANATION

A Shopify Article is a content-based page published through the store's blog system.

For GulBakes, articles can be used as content-marketing tools to provide bakery-related information, support customer engagement, and strengthen the store's overall content ecosystem.

The screenshot shows a branded GulBakes article containing bakery imagery and supporting content, providing practical evidence that content marketing has been integrated into the storefront.

SHOPIFY CUSTOM LIQUID

Theme-level customization

Figure 41— Shopify Theme Editor showing a Custom Liquid section with visible code.

PRACTICAL EVIDENCE

Screenshot: Shopify Theme Editor showing a Custom Liquid section with visible code.

Result: Custom Liquid is directly evidenced as part of the storefront customization.

EXPLANATION

Custom Liquid is a Shopify theme-customization feature that allows merchants to add Liquid, HTML, CSS, and suitable front-end code to a theme section. It is useful when the standard theme sections do not provide exactly the design or functionality required.

How to Create Custom Liquid

A general process is:

Open Shopify Admin.

Go to **Online Store**.

Open the **Theme Editor**.

Select the relevant page or template.

Choose **Add section** or the relevant section option.

Select **Custom Liquid**.

Enter the required Liquid/HTML/CSS code.

Check the layout on different screen sizes.

Save the changes.

SHOPIFY MOBILE HOMEPAGE

Mobile storefront

PRACTICAL EVIDENCE

Screenshot: Mobile Gul Bakery homepage with product/category sections.

Result: The mobile storefront experience is documented.

EXPLANATION

The screenshot visibly shows the mobile homepage and its branded content sections.

Figure 42— Mobile Gul Bakery homepage with product/category sections.

BREVO CONTACTS

Email audience setup

Private details removed

PRACTICAL EVIDENCE

Screenshot: Brevo contact list containing visible email records.

Result: A contact database is present.

EXPLANATION

Brevo is a digital communication and email-marketing platform that can be used to manage contacts, create email campaigns, configure automation, and monitor email activity.

Brevo Contacts is the area where customer or subscriber contact records are stored.

A contact database is important for email marketing because campaigns and automated communication require an organized audience.

Figure 43— Brevo contact list containing visible email records.

BREVO PROFILE / ACCOUNT

Brevo account information

Private details removed

PRACTICAL EVIDENCE

Screenshot: Brevo account profile page showing visible account and company information.

Result: The Brevo account profile is configured.

EXPLANATION

The Brevo Profile or Account section contains account-level information associated with the Brevo environment.

A general Brevo setup process for GulBakes includes:

- Create or access the Brevo account.

- Configure the business/account information.

- Set up the email domain.

- Complete domain authentication through the required DNS records.

- Create or import contacts.

- Organize contacts into suitable lists.

- Create an email campaign.

- Design the email using the email editor.

- Configure automation where required.

- Test the email.

- Review the campaign before sending.

Figure 44— Brevo account profile page showing visible account and company information.

BREVO DOMAIN AUTHENTICATION

[Back to domains](#) [Check configuration](#)

PRACTICAL EVIDENCE

Screenshot: Brevo domain authentication page showing DNS records and authentication status.

Result: Domain authentication is configured in Brevo.

EXPLANATION

Domain authentication is an important part of professional email marketing. It connects the sending domain with the email-marketing platform through authentication records.

Brevo's domain-authentication section can display DNS records and verification controls.

Figure 45— Brevo domain authentication page showing DNS records and authentication status.

BREVO EMAIL CAMPAIGN

Email marketing asset

PRACTICAL EVIDENCE

Screenshot: Brevo email design preview for a Gul Bakery welcome/marketing message.

Result: A branded email campaign asset has been prepared.

EXPLANATION

An email campaign is a planned marketing or communication message sent to a selected group of contacts.

For GulBakes, the email campaign can be used for welcome messages, promotions, bakery updates, product communication, or customer engagement.

Figure 46— Brevo email design preview for a Gul Bakery welcome/marketing message.

Figure 47— Brevo email editor showing the Gul Bakery email layout and editable content.

PRACTICAL EVIDENCE

Screenshot: Brevo email editor showing the Gul Bakery email layout and editable content.

Result: Email content can be designed and reviewed before sending.

SCREENSHOT EXPLANATION

The Brevo Email Editor is a visual environment used to create and customize email campaigns.

It allows the user to arrange content blocks, text, images, buttons, and other email elements.

Figure 48 — Brevo automation activation dialog showing an email workflow.

PRACTICAL EVIDENCE

Screenshot: Brevo automation activation dialog showing an email workflow.

Result: An automated email workflow is configured.

EXPLANATION

Brevo Automation allows businesses to create automated communication workflows based on predefined triggers or customer actions.

For GulBakes, automation can support customer communication after a contact enters the email database or performs a relevant action.

BREVO TEST MESSAGES

Campaign testing

Figure 49— Brevo test-message screen showing a processed email step.

PRACTICAL EVIDENCE

Screenshot: Brevo test-message screen showing a processed email step.

Result: Email testing is part of the campaign setup process.

EXPLANATION

Test messages are used before sending a campaign to the complete audience.

Testing helps verify:

- Email appearance
- Content
- Links
- Formatting
- Call-to-action elements
- Overall layout

Figure 50— Account personal-information screen showing profile and contact fields.

PRACTICAL EVIDENCE

Screenshot: Account personal-information screen showing profile and contact fields.

Result: Account configuration evidence is documented without repeating sensitive values.

EXPLANATION

The project also contains a screenshot showing an account/personal-information settings screen. The screenshot visibly contains profile and contact-related fields

For reporting purposes, this evidence should be described without reproducing private values such as personal contact information. Its purpose is simply to demonstrate that account configuration was completed as part of the digital-business setup.

AI-ASSISTED SHOPIFY WORKFLOW

AI support for e-commerce setup

PRACTICAL EVIDENCE

Screenshot: ChatGPT screen showing a recommended Shopify product setup for Gul Bakery.

Result: AI assistance is evidenced as part of the e-commerce workflow.

EXPLANATION

The AI-assisted Shopify workflow demonstrates how artificial intelligence can support the technical and content side of e-commerce.

In the GulBakes project, the screenshot shows a ChatGPT interface providing recommended Shopify product setup information. This demonstrates practical AI assistance during the e-commerce workflow.

The workflow can be represented as:

Requirement → AI Assistance → Human Review → Shopify Implementation → Final Product Asset

This ensures that AI remains a supporting tool while the final decision and implementation remain under human control.

Figure 51 — ChatGPT screen showing a recommended Shopify product setup for Gul Bakery.

SHOPIFY CONVERSION FUNNEL

Customer path through the storefront

Retention can then continue through Brevo, WhatsApp and social communication.

MARKETING FUNNEL

META TECHNICAL ECOSYSTEM

Business and measurement architecture

INTEGRATED DIGITAL ECOSYSTEM

How the platforms work together strategically

Meta Business Suite supports social management, while LinkedIn supports professional positioning.

KPI FRAMEWORK

Metrics to monitor — not claims about actual results

Social & Paid

Reach, impressions, engagement and follower growth
CTR, CPC and CPM for paid campaigns
Conversions and ROAS where measurement is available

E-commerce & Email

Product views, add-to-cart, checkout and orders
Conversion rate for the storefront
Brevo contacts, delivery, opens, clicks and conversions

SWOT ANALYSIS

Strategic assessment of the project

Strengths / Opportunities

Strong visual identity and cohesive bakery aesthetic
Multi-channel digital presence
E-commerce + direct communication + email ecosystem
Opportunity to strengthen content, measurement and retention

Weaknesses / Threats

Performance outcomes should be validated through ongoing analytics
Channel complexity requires consistent management
Competition in digital bakery discovery can be high
Tracking quality depends on correct technical configuration

SMART OBJECTIVES

A framework for future measurable goals

PLATFORM-TO-FUNNEL MATRIX

Strategic role of each digital channel

Awareness → Consideration

Facebook: awareness + community

Instagram: visual discovery + engagement

Meta Ads: paid awareness + consideration

Canva: creative production

Shopify: consideration through product presentation

Purchase → Retention

Shopify: cart and checkout

WhatsApp: direct communication where appropriate

Brevo: email engagement and retention

LinkedIn: professional positioning

Meta Business Suite: social management

PROFESSIONAL / FREELANCE PLATFORMS

Include only platforms evidenced in the supplied material

Evidence Rule

Only platforms with actual screenshots should be included.
Each platform should have its own factual evidence caption.
No professional opportunity or client result should be invented.

Purpose

Professional positioning
Portfolio visibility
Networking and opportunity discovery
Digital marketer / business-owner identity

TOOLS & SOFTWARE USED

Summary of the documented digital stack

E-commerce & Creative

Shopify — storefront, products, collections, theme and checkout

Canva — logo and graphic design

Shopify Custom Liquid — theme customization

Marketing & Communication

Facebook / Instagram — social presence

WhatsApp — direct communication

Brevo — email marketing

Meta Business Suite / Ads / Dataset / Pixel / Events — business and advertising ecosystem

LinkedIn — professional presence

AI tools — assistance where evidenced

SKILLS ACQUIRED

Consolidated practical skills

Marketing & E-commerce

Social media marketing
E-commerce storefront development
Product and collection management
Customer journey and funnel planning
Email marketing

Technical & Professional

Canva graphic design and brand identity
Meta business and tracking concepts
Shopify theme / Custom Liquid exposure
AI-assisted workflow
Professional digital branding

Customer Acquisition

Canva → visual identity

Facebook + Instagram → awareness and engagement

Meta Ads → paid promotion

Shopify → product discovery and conversion

Relationship & Retention

WhatsApp → direct communication

Brevo → email and retention

Meta Business Suite → management

LinkedIn → professional presence

Project Outcome

Developed and documented the **GUL BAKES digital business ecosystem** using multiple online platforms.

Created and organized an **e-commerce presence through Shopify**, including products, collections, navigation, domain, theme customization, cart, and checkout.

Established practical integration with **Facebook, Instagram, WhatsApp Business, Meta Business Suite, Meta Pixel, and Meta advertising tools**.

Implemented **email marketing and automation concepts using Brevo**.

Applied **Canva and AI tools** to support branding, content creation, and digital business activities.

Connected practical activities with digital marketing frameworks such as **AIDA, STP, marketing funnel, customer journey, SWOT, SMART objectives, and marketing mix**.

Key Learning

Gained practical understanding of **e-commerce store development and management**.

Learned how different **digital marketing platforms work together** as one business ecosystem.

Developed skills in **social media management, content planning, branding, and customer communication**.

Learned the practical role of **Meta Pixel, datasets, events, and advertising infrastructure**.

Gained experience in **email campaigns, automation, and customer engagement** through Brevo.

Improved understanding of **Shopify customization, Custom Liquid, domains, products, and store navigation**.

Learned how **AI tools can support digital marketing and e-commerce workflows**.

Developed the ability to connect **academic marketing concepts with practical digital business activities**.

Gul Bakes

Digital Marketing & E-commerce Practical Work Documentation

This project provided practical experience in digital marketing, e-commerce development, social media management, branding, customer communication, email marketing, Meta tools, Shopify customization, and AI-assisted workflows.

The project demonstrates the integration of multiple digital platforms into a unified business ecosystem while applying academic concepts such as the customer journey, marketing funnel, AIDA model, STP analysis, marketing mix, and digital strategy frameworks.
